

Student Performance Analytics Dashboard

1. Project Objective

This project analyzes student academic performance, attendance, and behavior using interactive Power BI dashboards. The goal is to help teachers and administrators monitor student progress and identify areas of improvement.

2. Data Overview

The dataset contains student information, subject-wise scores, attendance records, and behavior types. These tables are connected using proper relationships for accurate analysis.

3. Measures Created (DAX)

Key measures include % Score, Average Score, Attendance %, Present Days, Absent Days, Behavior Count, Performance Category (High/Medium/Low), Highest Score, Lowest Score, and Total Students.

4. Main Dashboard

The dashboard shows KPIs like Total Students, Average Score, and Attendance %, along with charts for subject performance and section-wise comparison.

5. Attendance Analysis

This page visualizes student attendance using Present Days, Absent Days, and Attendance %. It helps identify students with low attendance for early intervention.

6. Behavior Analysis

Behavior types such as Positive, Neutral, and Negative are analyzed using donut and bar charts to understand student discipline patterns.

7. Tooltip Insights

Custom tooltip pages provide detailed information when users hover over charts, such as student name, subject score, attendance, and performance category.

8. Student Performance Table

A detailed table shows student-wise scores with conditional formatting (green for >80%, red for <40%) to quickly highlight high and low performers.

9. Mobile View

A mobile-optimized layout was created in Power BI to allow users to view student performance dashboards on smartphones and tablets.

Mobile View Attendance Analysis

10. Final Outcome

The Student Performance Analytics Dashboard provides a complete view of academic results, attendance, and behavior, enabling data-driven decisions to improve student outcomes.
